NOTICE:

- **This Accessory Socket is rated for a maximum current of up to 3amps.**
- **Switch off or disconnect accessories when the engine is stopped to avoid discharging the battery.**

INSTALLATION

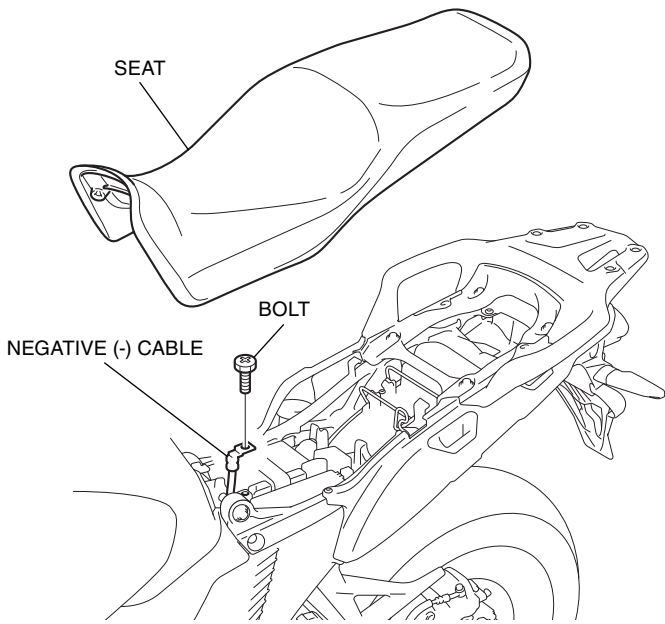

▲ CAUTION

- To prevent burns, allow the engine, exhaust system, radiator, etc. to cool before installing the accessory.

NOTE:

- Take care not to damage the painted surfaces of the motorcycle.
- Reinstall the removed parts on the motorcycle and make sure that wires and harnesses are not pinched.
- Disconnect the negative (-) cable from the battery before installing this accessory.
- The memories of the tripmeter, and clock will be erased when you disconnect the battery. After reconnecting the battery, refer to the motorcycle Owner's Manual and reset the clock.
- Trim the excess ends off the wire ties after attaching them to the wire harnesses. Do not allow the cut part of the wire tie to interfere with another harness or brake hose.
- After this accessory installation, check the lights (e.g. right / left turn signal lights and brake lights) for proper operation.
- When replacing any other accessory that is required to install this accessory, follow these instructions only.

1. Refer to the Service Manual to remove the following parts. Disconnect the negative (-) cable from the battery.

2. Disconnect the positive battery cable, and remove the battery.

3. Remove the following clips and bolts in the order described then remove the left middle cowl. Disconnect the connector.
 - Repeat on the right side.

<Left side>
